THINK LIKE A

REBEL

To think like a Rebel is to **question everything**.

It's going **against the grain**, shedding preconceived notions, and being willing to look at old problems with **new ideas**. In terms of equipment, it's thinking about the way something looks and feels, the way it acts and reacts. It's **taking chances** on what could be instead of what has been.

THAT'S HOW REBELS PAK.

You see we're a company with our roots in tackling problems without prejudice, preference, or preconceived notions about how something should or shouldn't work.

We're focusing on **empowering our clients** with a user experience based on intuition instead of memorization.

We're leveraging the digital world to execute design **collaboration**, acceptance, and commissioning all remotely through integrated digital media, minimizing cost to our clients, maximizing speed to deployment.

We're designing highly flexible equipment able to meet the demands of shifting supply chains. And most importantly we're designing equipment of which we're incredibly proud, **right here on American soil**.

So if you want to explore what your factory floor would feel like if it was

Smarter

Faster

More flexible

THEN PAK LIKE A REBEL

INTRODUCING RPZ-10

PALLETIZING WITH A COLLABORATIVE ROBOT

Leveraging collaborative robot technology is about more than safety. It's a paradigm shift away from traditional automation. It allows clients to deploy affordable, point-of-use automation solutions specifically targeting repetitive activities where ergonomic and general safety concerns are present.

When it comes to palletizing, the RPZ-10 enables clients to mitigate the risks associated with a changing labor landscape by providing a system directly targeting end of line packaging requirements typically served by manual operation.

WHY SO EFFECTIVE?

USER EXPERIENCE

Automation is only as effective as it is user friendly. IRIS has invested thousands of hours in HMI development assuring our clients the most seamless and intuitive user experience available on cobot palletizers. In short you don't need to be a robot expert to program and operate the RPZ-10. Our user interface has been designed and refined to accommodate even the most novice user. Program, operate, and troubleshoot in minutes, not hours.

COST

Most palletizing applications have a 12-24 month ROI in addition to the added value of knowing your system will be there operating regardless of a dynamic labor market.

SIZE

Available in either single or double pallet configurations, the RPZ-10 has a modest footprint and multiple infeed options, making it conducive to most any end of palletizing application.

FLEXIBILITY

Leveraging both the built-in drag-and-drop palletizing wizard and highly adjustable EOAT, systems can change over from one product to the next in minutes.

WHY WORK WITH IRIS FACTORY AUTOMATION?

At IRIS, we treat our clients the same way we would want to be treated. We work hard to understand your goals and expectations, we leverage our experience to take our clients down the right path, and we do what we say we're going to do.

IRIS is an organization that listens to our clients, thinks outside the box, and does what it takes to produce reliable and innovative automation - **just ask our clients, they'll tell you.**

Reliability.

We leverage off the shelf products from world class suppliers, affording our clients familiarity and flexibility when it comes to understanding and maintaining our systems.

Experience.

We are more than a palletizing firm, we're a firm that applies new ideas and technology to old problems that helps us to serve our clients in their journey to improve their quality, mitigate their production costs, and improve their processes.

CUSTOM AUTOMATION

FAQs

How many cases per minute?

When it comes to cobot palletizing, think in terms of pounds / minute. The RPZ-10 can move approximately 16lbs every 9-10 Seconds. Common pick configurations includes single pick and dual pick to help balance payload and rate requirements.

Can I add slipsheets?

Absolutely! Just indicate your slip sheets specification and we'll recommend one of our specially designed easels!

Can I palletize to either side of the system individually or at the same time?

Yes! You can either palletize to just one side if you're space limited or you can palletize to both sides to support uninterrupted operation.

Is it safe?

The RPZ-10 deploys multiple layers of safety using collaborative robot technology as a base and then layering on safety scanners, speed limitations and even small sections of guarding where necessary or requested.

Is it easy?

The IRIS RPZ-10 palletizing wizard and interface is the most capable on the market. It provides drag-and-drop pallet building, built-in recipe storage, and a visual factory focused approach to indication and diagnosis.

How long does it take to install?

Most installations have the system running the same day it's delivered.

How soon can I get one?

Depending on your requirements, systems are typically ready for FAT 6-8 weeks from order.

SYSTEM FEATURES

DUAL SIDE PALLETIZING

Dual side palletizing in combination with collaborative technology allows for removal of a completed pallet while palletizing continues on the adjacent pallet.

INTUITIVE USER EXPERIENCE

Using icon-based instructions and easy-to-understand indicators, the IRIS user interface looks and feels like an application more common to today's consumer electronics.

INTEGRATED PALLETIZING WIZARD

Many of today's packaging and co-packaging firms are faced with the challenges of high product change over. To combat this, IRIS provides an integrated palletizing wizard, allowing clients to build custom pallet patterns in a drag-and-drop format, increasing productivity, and decreasing reliance on external programming assistance.

VISUAL FACTORY FEATURES

IRIS believes the status of its equipment should be visible from afar, allowing for at-a-glance assessment of system status. For this reason, we include IO-link based smart indicator lighting and illuminated safety interfaces.

MINIMAL FOOTPRINT

Due to both its collaborative architecture and efficient design, the RPZ-10 requires less than 50 ft. of unguarded floor space. (104" W x 64" D).

USER EXPERIENCE

Our palletizing software features an intuitive graphic interface that works directly with the robot. End-users build pallets by entering dimensions and dragging boxes into the position they are to be placed.

Software Features

- User-friendly layout
- At-a-glance status
- Cumulative totals
- Recipe management
- Tiered security access
- Intuitive job selection

Palletizing Wizard

- Smart recipe builders
- Drag and drop action
- Fast learning curve
- Ability to orient labels
- Import/export features

SAFETY CONFIGURATIONS

Option 01

6' H safety fencing on the rear and sides of the palletizing cell

Option 02

Safety scanner protection across the front of the cell

Option 03

360° safety scanner coverage from 3 independent laser safety scanners
